                                                                                                                                                                                                                                                                          The present sequence is the protein sequence of Streptococcus sobrinus glucosyltransferase-I (GTF-I). Peptide fragments of GTF-I, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Composition useful as vaccines for a glucan binding protein-B binding class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADD93657 standard; protein; 1590 AA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1592
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The DNA sequence from Streptococcus sobrinus strain 6715 encodes glucosyltransferase-I (and mutants). The DNA was obtd. by treating S. sobrinus 6715 with mutanolysin, extracting the chromosomal DNA, partially digesting with Sau3AI and fractionating on agarose gel. The 3-5 kbp fragment was ligated into pUC18 and E. coli JM109 transformed with it. A GT-1 expressing clone was isolated and sequenced. The clone may be used in the development of a drug for dental caries
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Streptococcus sobrinus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 13; Page 15; 29pp; Japanese.

                                                       The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.
                                                                                                                                                                                                                                                                                                  Anti-caries agent composed of a monoclonal antibody against an inhibitory enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibody; dental caries; water insoluble glucan synthetase; anti-caries; glucosyl transferase-B; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Streptococcus mutans monoclonal antibody-related protein #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          13-AUG-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAU79284;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
The invention an isolated protein comprising a glucosyltransferase (GTF) CC Hoppeptide having changes at position from 1748V, D457N, D567T, D457N/D571K, D567T/D571K, D567T/D571K, K1014T, CC (14487, D457N/D567T, D457N/D571K, D567T/D571K, D567T/D571K, K1014T, CC (1470)D457N/D567T, D571K/K1014T, CC (1471)D457N)D567T, D571K/K1014T, CC (1471)D457N)D567T, D571K/K1014T, CC (1471)D4589D, and N471D/T589D. Also included are a glucan produced by the CC (GTF mutant, an isolated polymucleotide which encodes Pl or P2, or its complementary polymucleotide, a ribonucleic acid sequence encoding the CC (GTF mutant, an expression cassette comprising the polymucleotide operably CC (Inked to a promoter, a vector, a transgenic plant; a paper sizing and/or vector, a seed or tuber from the transgenic plant; a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, the squeam produced in starch biosynthesis, transformed with a gene encoding a glucan produced in the amyloplast and/or vacuole or a maize line comprising the glucan in starch biosynthesis, transformed with a gene encoding a comprising the glucan producing a glucan in a plant. The vector is useful for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing a plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyitransferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyltransferase-B and is used in the immunotherapy of dental caries. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local Similarity
                                                                                                                                                                                                                                The present sequence is the protein sequence of Streptococcus mutans glucosyltransferase-C (GTF-C). Peptide fragments of GTF-C, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

CC GIF mutant, an expression cassette comprising the polynucleotide operably collinked to a promoter, a vector comprising the polynucleotide operably collinked to a promoter, a vector, a transgenic plant comprising the comprising the comprising the comprising the expression cassette, host colling to tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GIF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a comprising the glucan in a plant. The method comprises transforming a conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the composerated plant, where the vector contains a transit sequence from continuous biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet.

CC Glucans are useful as substitutes for and additions to modified starch conditions to maintacture. Unlike prior art techniques, which creative input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D567T, D457N/D571K, D567T/D571K, M790, M567T/D57K/K779Q/K1014T, Y169A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T599E, N471D, M471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polymicalectide which encodes P1 or P2, or its complementary polymicalectide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the nolymicalectide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Glucosyltransferase B or D protein useful for producing as substitutes for and additions to modified starch and manufacture, comprises mutations in specific positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Synthetic

coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, combinating composition molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a glunt cell with the vector, growing the plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector formatins a transit sequence from craylong phylography protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CG Glucans are useful as substitutes for and additions to modified starch can latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce day GTF, which utilises chiologically produced input materials, is more cost-effective and convironmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S

comprementary polymucleotide, a ribonucleic acid sequence encoding the cell introduced with the vector comprising the polymucleotide operably cell inked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, as seed or tuber from the transgenic plant comprising the coating composition comprising a glucan produced in a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, comprising the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a comprising the glucan (paper sizing/coating agene encoding a comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector of the produce the glucan in the produced in the amyloplast of potato or the vacuole of sugar beet. Cell comparison to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Cell comparison to produce the glucan plant, and glucan cell value in paper manufacture. Unlike prior art techniques, which cell manufacture utilising the glucan produce displaced in for any additions to modified starch cell withing the glucan produced of growing the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the glucar in a paper during coating step. The present considered by the indexer in paper manufacture and specification but was created by the indexer using the glucan in the scenarior as axingancy and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       16-JAN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indusing the GTFB sequence appearing as AAU98027 and the information in claim 36
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         07-JUN-1995;

The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from I448V, D457N, D567T, D457N/D567T, D457N/D571K, D567T,D571K, D567T,D571K, D567T,D571K/K1014T, I69A/Y170A/Y171A, and K779Q or a GTF D polypeptide having changes at positions from T589D, T589E, N471D, T589E, N471D/T589D, and N471D/T589E. Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the polynucleotide operably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Streptococcus
Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  coating composition;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Glucosyltransferase;

linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.

deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the polynucleotide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC conditions to the manufacture to produce the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch CC and latexes in paper manufacture. Unlike prior art techniques, which crequire input materials and produced chemical effluents, paper CC require input materials that produce chemical effluents, paper CC inclogically produced input materials, is more cost-effective and CC environmentally friendly. Moreover, glucans also exhibit thermoplastic groperties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer in the information in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is the protein sequence of Streptococcus mutans glucosyltransferase-B (GTF-B). Peptide fragments of GTF-B, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a meammal. Diepitopic or multi-pritopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Composition useful as vaccines for a glucan binding protein-B binding class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                07-MAR-2002;

Comptementary polynucies or a ribonucies acta sequence encoding the coll introduced with the vector comprising the polynucleotide operably cell introduced with the vector, a transgenic plant comprising the vector, a seed or tuber from the transgenic plant comprising the coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, cell through a plucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, cell with a gene encoding the mutant GTF, wild type or, starch, a latex, cell with a gene encoding the mutant GTF, wild type or starch, a latex, cell with a gene encoding a glucan produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan cell with the vector, growing the plant and a paper of plant feell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from cell under plant and substitutes for and additions to modified starch is produced in the amyloplast of potato or the vacuole of sugar beet. Cell canns are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which cell withless that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically friendly. Moreover, glucans also exhibit thermoplastic environmentally friendly. Moreover, glucans also exhibit thermoplastic sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer middle sequence is not shown in the specification sequence in formation in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               16-JAN-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                98US-00007999.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (GTF)
```

```
CC The invention an isolated protein comprising a glucosyltransferase (GTP) CC B polypeptide having changes at position from 1448V, D457N, D567T, D457N/D571K, D567T/D571K, D567T/D571K, N1567T, D577T/S71K/X1014T, CC I1448V/D457N/D567T, D457N/D571K, D567T/D571K, X1014T, CC II448V/D457N/D567TD, T589E, Also included are a glucan produced by the CC GTF mutant, an isolated polynucleotide which encodes P1 or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the complementary polynucleotide, a ribonucleic acid sequence encoding the vector, a promoter, a vector comprising the polynucleotide operably clinked to a promoter, a vector comprising the pant comprising the vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a glucosyltransferase B or D enzyme, wild-type or mutant and a paper comprising the vector, growing the plant cell under plant growing a plant cell with the vector is useful for producing a glucan in a plant. The method comprises transforming a conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from chorometals binding expression of the polynucleotide in the amyloplast of potato or the vacuole of sugar beet. is produced in the amyloplast of potato or the vacuole of sugar beet.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 16-JAN-1998;

paper

The invention an isolated protein comprising a glucosyltransferase B polypeptide having changes at position from I448V, D457N, D567T, K1014T, D457N/D571K, D567T/D571K, 7T/D57TK, D567T/D57TK, D567TK,

Claim 36; manufacture,

Page; 44pp;

English

as substitutes for and additions

or D protein useful for producing dadditions to modified starch and mutations in specific positions.

Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coatting step. The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in claim 36

The method comprises transforming a CG plucan grave a plucan in a plant. The method comprises transforming a CG plucan grave a time sufficient to produce the glucan in the CG plucantions to produce a regenerated plant and inducing expression of the CG plucans are useful as multiple to produce a transforming and CG plucans are useful as substitutes for and additions to modified starch candidate in the sufficient contains a transit sequence find CG proporties and impart gloss to the paper during coating sex beet. CG biologically produced input materials, is more cost-effective and convictive and interest gloss to the paper during coating step. The present convictions are useful as substitutes for and additions to modified starch convictive and interest gloss to the paper during coating step. The present convictive and interest gloss to the paper during coating step. The present composities and impart gloss to the paper during coating step. The present composities and interest a GTFB mutant of the invention. Note: The present coincide the corrected by the indexer cusing the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the production of ship hulls. It can also be incorporated in mutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the glucansucrase gene. (Updated on 23-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel glucan produced by glucosyltransferase activity of lactic acid bacterium on sucrose substrate, and having backbone consisting of alpha (1,3)- and alpha (1,6)-linked anhydroglucose units, useful as thickener.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 11; Fig 1; 51pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC GTF D polypeptide having changes at positions from T589D, T589E, N471D, CC GTF matant, an isolated polynucleotide which encodes P1 or P2, or its C complementary polynucleotide, a ribonucleic acid sequence encoding the CC complementary polynucleotide, a ribonucleic acid sequence encoding the CC complementary polynucleotide, a ribonucleic acid sequence encoding the CC complementary polynucleotide operably CC linked to a promoter, a vector comprising the sypression cassette, host CC vector, a seed or tuber from the transgenic plant, a paper sixing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTE, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC deficient in starch biosynthesis, transformed with a gene encoding a CC comprising the glucan (paper sixing/coating agent). The vector is useful comprising the glucan in a plant. The method comprises transforming a CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing the plant cell under plant growing cC conditions to produce a regenerated plant and inducing expression of the regenerated plant, where the vector contains a transgenic plant, and glucan cc is produced in the amyloplast of potato or the vacuole of sugar beet. CC dlucans are useful as substitutes for and additions to modified starch cC and latexes in paper manufacture. Unlike prior art techniques, which cc graphire imput materials that produce a transgenic plant, and glucan cc are guitant produced in the appear and additions to modified starch cc graphic ture to produce themical efficients, paper conditied starch cc graphic produced in the prosent cc graphic produced in the prosent cc graphic produced in the produced produced by CTF, which utilises bi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              문

complementary polynucleotide, a ribonucleit add sequence encoding the CC GTF mutant, an expression cassette comprising the polynucleotide operably CC linked to a promoter, a vector comprising the expression cassette, host CC cell introduced with the vector, a transgenic plant comprising the CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or CC coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising a glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the cc regenerated plant, where the vector contains a transit sequence from cc chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch cc and latexes in paper manufacture. Unlike prior art techniques, which cc comprises and impart gloss to the paper during coating step. The present CC sequence is not shown in the specification but was created by the indexer cusing the GTFB sequence appearing as AAU98027 and the information in

The vector is useful comprising the glucan in a plant. The method comprises transforming a complex conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the coll with where the vector contains a transit sequence from continuous biphosphate carboxylase small subunit, waxy, brittle-1 and controphyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Contains are useful as substitutes for and additions to modified starch cardiateses in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper convironmentally friendly. Moreover, glucans also exhibit thermoplastic proporties and impart gloss to the paper during coating step. The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The method is useful as a thickener, as a prebiotic and as a bloactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the castrointestinal tract. The present sequence represents a sequence of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    giucansucrase gene
                               This invention relates to a modified dextran sucrase (DS) exchanging one site of the active centre zone of a dextran sucrase for the active centre zone of different types of dextran sucrase. Glucan is a polysaccharide (for example dextran) which uses D-glucoses, such as a starch and a cellulose, as a structural unit. The modified enzyme of the invention is useful in the manufacture of glucan. The selection of the active centre area of DS which carries out transduction, enables changes in structure and character of an enzyme-reaction product and their application to various uses. The present sequence is that of a protein which is related to the Leuconostoc mesenteroides dextran sucrase protein and which was used during the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dextran sucrase; active centre zone; D-glucose; starch; cellulose; glucan

                                                                                                                                           The invention relates to preparation of a fermented food product that concludes treating the microorganism (A) to be used for fermentation with a dextransucrase so that this binds to the cell walls of (A). The method is used to produce yoghurt, curd, cheese or other fermented milk confight formulae and pet foods. Dextransucrase can also be bound to e.g. crimins or oral vaccines for delivering these to foods, using (A) as concarrier. The method produces foods with attractive and uniform texture, since dextransucrase is evenly distributed and forms a thickening agent consistent with the amount formed being controlled by the amount of certical cardieve a good texture, so the amount of becaused. Dextransucrase bound, Milk does not have to be coagulated in order to reduced. Dextransucrase binds to many different types of cells over wide cranges of temperature and plh and the treated bacteria can be stored in controlled or powdered form. The present sequence represents the amino acid gequence of dextransucrase

                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a modified dextran sucrase (DS) exchanging one site of the active centre zone of a dextran sucrase for the active centre zone of different types of dextran sucrase. Glucan is a polysaccharide (for example dextran) which uses D-glucoses, such as a starch and a cellulose, as a structural unit. The modified enzyme of the invention is useful in the manufacture of glucan. The selection of the active centre area of DS which carries out transduction, enables changes in structure and character of an enzyme-reaction product and their application to various uses. The present sequence is that of the Leuconostoc mesenteroides dextran sucrase protein used during the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          JP2003111590-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               glucosyltransferase-U (GTF-U). Peptide fragments of GTF-U, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class II protein-binding peptide from S. mutants glucan binding protein-B (GbpB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Diepitopic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The
